ABBA Abdeldjabbar

Computer Science Student · Artificial Intelligence · Software & Web Development

Location Algiers, Algeria **Email** Abdeldjabbar2ii5@gmail.com **Phone** 0562394350

PROFESSIONAL PROFILE

Computer Science student at the National School of Advanced Technologies (ENSTA) in Algiers, specializing in Artificial Intelligence (expected graduation: 2028). I have a broad foundation in programming, databases, data analysis and web development, and I learn new tools independently through hands-on projects. I am seeking internships, junior and project-based opportunities in software, web, data or AI-related work.

EDUCATION

National School of Advanced Technologies (ENSTA)

Expected graduation 2028

Computer Science — Artificial Intelligence Specialization · Algiers, Algeria

- Currently in the fourth year of Computer Science and the second year of the AI specialization.
- Foundation in algorithms, programming, software development, databases, computer systems, mathematics, statistics and data analysis.
- Developing machine learning and AI knowledge through specialized coursework.

Baccalaureate in Mathematics

2023

Secondary education

TECHNICAL SKILLS

Independent use · Used in projects · Introductory exposure · Currently studying

PROGRAMMING & SCRIPTING

Python · JavaScript · SQL · Bash / Shell · Dart / Flutter · Java · C / C++ · TypeScript

DATA ANALYSIS & AI

Pandas · NumPy · Matplotlib · Seaborn · Jupyter Notebook · Data cleaning & EDA · Scikit-learn · TensorFlow / PyTorch · Excel · Power BI · Model evaluation & metrics

DATABASES

PostgreSQL · MySQL · SQLite · Supabase · Schema design & normalization · Joins & aggregates · MongoDB

WEB & APIS

HTML · CSS · Responsive interfaces · Python back-end · REST APIs · JSON · Node.js / Express · React / Vue · Authentication

SCRAPING & AUTOMATION

Web data extraction · Data processing & storage · Task automation · BeautifulSoup / Scrapy / Selenium

TOOLS & DEPLOYMENT

Git & GitHub · Linux & command line · Render hosting · Custom domain setup · Debugging & testing · Docker

COMPUTER SCIENCE FOUNDATION

CORE COMPUTING
- Algorithms & data structures
- Object-oriented programming
- Software engineering

SYSTEMS & NETWORKS
- Operating systems & Linux
- Computer architecture & assembly
- Computer networks

DATA & INFORMATION SYSTEMS
- Databases & information systems
- Data analysis on structured datasets

MATHEMATICS
- Probability & statistics
- Linear algebra
- Numerical analysis

AI SPECIALIZATION (IN PROGRESS)
- Machine learning & AI — currently studying

Academic foundation knowledge, not professional-level expertise.

SELECTED PROJECTS

ColorsDuo — Web Platform
Individual web project · built and deployed

Role: Developed the platform end to end: front end, Python back end, database integration, data preparation and hosting.

- Features: browsing, color-combination discovery, creator tool, tags and locally saved favorites.
- Cleaned the dataset from 12,660 raw records to 9,119 valid combinations.
- Used database pagination to load records in batches instead of the whole dataset.
- Managed code on GitHub; deployed with Render, Supabase/PostgreSQL and a custom domain.

HTML · CSS · JavaScript · Python · Supabase / PostgreSQL · Render · GitHub

Medical Insurance Cost Prediction
Academic project · predictive analysis

Role: Explored predictive-analysis concepts on a medical insurance cost dataset.

- Practised data preparation, cleaning, validation and exploratory analysis with Python data tools.
- Built understanding of statistical analysis, machine learning and model evaluation.

Python · data analysis

ACADEMIC & PRACTICAL WORK

Database, Scraping & Automation
Practical work · academic & personal

Role: Designed relational tables and wrote queries; collected and organized web data with programming.

- Created tables and relationships between data entities; worked on normalization.
- Wrote SQL with joins, grouping and aggregate functions (COUNT, SUM, AVG).
- Extracted web data, organized the results and explored storing them in databases.
- Automated repetitive data-collection and processing tasks.

SQL · PostgreSQL · MySQL · SQLite · Python

Team Application Development
Academic team work with fellow students

Role: Contributed to a collaborative application built during my studies.

- Worked through the process of turning an idea into a working prototype.
- Gained exposure to collaborative development and implementation challenges.

Programming · teamwork · prototyping

PERSONAL STRENGTHS

Problem-solving · Independent learning · Adaptability · Organization & time management · Communication & persuasion · Practical, project-oriented mindset · Curiosity

LANGUAGES

Arabic · Native · English · Fluent · French · Basic
